

## **Create On Hand Components File**

**PROGRAM NAME:** FOADDBOM

**MENU OPTION TITLE:** Create On Hand Components File

**MAIN MODULE:** MANUFACTURING MRP

**HELP KEY ACTIVE:** NO

### **PROGRAM OVERVIEW**

This program breaks down all parts and assemblies in the inventory master file into the basic components. Any parts with the breakdown flag set to <N> will be ignored. This provides the materials management personnel with the ability to decide whether assembled goods in finished inventory and all components within them are to be broken down and considered useable for any manufacturing process...or not!

In an aggressive environment where planning is manipulated daily, this program will have to be run daily. A restrictive flag is placed in the system file that prevents from more than one user running this program at the same time.

### **PROGRAM OPERATION**
