

Print 12 Week Production Plan

PROGRAM NAME: FOPROD_W

MENU OPTION TITLE: Print 12 Week Production Plan

MAIN MODULE: MANUFACTURING MRP

HELP KEY ACTIVE: YES

PROGRAM OVERVIEW

This program generates a 12 week report per part in a spreadsheet layout, with data from the Master Production Schedule, the Master Sales Forecast, the master inventory file, and the sales system.

Each part will start with the beginning inventory on hand, and subtract unshipped orders, subtract sales forecasted, add the master production plan, and come up with a net inventory balance at the end of each week. This allows you to look at you inventory balances at the end of each week.

PROGRAM OPERATION

BEGINNING DATE FOR REPORT: The program will load today's date. You can change this date, but it is intended to start with the current date as loaded.

ENDING DATE FOR REPORT: The program will automatically calculate 12 weeks from whatever beginning date you enter. Keep in mind the MRP system is based on a perpetual year theory, meaning that you should consider all time beyond the current time future data. You must manage your Master Sales Forecast and Master Production Schedule with this in mind.

PRESS RETURN TO START REPORT

WORKING, PLEASE WAIT ... You can hit the escape key to stop the report. The parts that are being printed will display on screen.
