

Recalculate Assigned Print

PROGRAM NAME: INASSIGR

MENU OPTION TITLE: Recalculate Assigned Print

MAIN MODULE: PARTS MAINTENANCE

HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This report is a fast way to view all part numbers and print out a list of any assigned quantities. By part number, the printout will show amounts per customer order number and per work order number. The total quantities assigned will show for Raw and Finished goods in separate columns. That assigned amount should match the number in the ASSIGN field of any of the inventory viewing screens throughout the software.

This program gives you some good information to help determine the best ways to manage your stock levels.

NOTE: This program prints a report after recalculating the assigned amounts. If you do not need a print out, use the menu option <Recalculate Assigned Print>. It performs the recalculation but does not print the update.

PROGRAM OPERATION

Proceed with recalculating assigned<Y/N>?

Enter PART # to calculate, RETURN for all: Type a valid part number to calculate that part number or press <ENTER> to calculate for all parts.

PRESS RETURN TO BEGIN, ESC TO ABORT

Calculating assigned for part # ----->
