## Update Scheduled Price Changes

**PROGRAM NAME:** INPRCDO
**MENU OPTION TITLE:** Update Scheduled Price Changes
**MAIN MODULE:** PART PRICE MAINTENANCE MENU #1
**HELP KEY ACTIVE:** YES

## PROGRAM OVERVIEW

This utility program will complete a process that was started by using the program "Enter/Edit Scheduled Price Chg". You need to run this program when a scheduled price change, stored in the system, is going into effect. This program is only usable when there is information stored from the program "Enter/Edit Scheduled Price Chg". This program is user defined and can aid in being very selective as to the price changes you want to run. You can select a group of parts and a consecutive list of parts within that group. You can say no to update certain price fields within that consecutive list of parts, within that selected group of parts, and so forth. I think you get my meaning. REMEMBER: fields that do not have an entry (left as 0) will not be updated.

## PROGRAM OPERATION

**PRESS RETURN TO BEGIN, ESC TO ABORT**

**ENTER PART GROUP TO SELECT, BLANK FOR ALL:** If you need to run the update by a group of parts, type the group code that would exist in "INPRTGUT" or leave blank. If you type in an invalid answer the system cannot locate it (because it does not exist) and your program will not run properly.

**ENTER BEGINNING PART # TO SELECT, BALNK FOR ALL: < >:** To select a range of CONSECUTIVE ONLY part numbers type in the first number of the consecutive list and press <ENTER> or enter past for the beginning part number.

**ENTER ENDING PART # TO SELECT, BLANK FOR ALL: < >:** If you have selected a part number in the previous field, this is where you define the last part number of the list. Press <ENTER> to accept the part number or blank for the last part number.

**CHANGE WHOLESALE PRICES (Y/N)?: Y**
**CHANGE DEALER PRICES (Y/N)?: Y**
**CHANGE RETAIL PRICES (Y/N)?: Y**
**CHANGE LIST PRICES (Y/N)?: Y**
**CHANGE RAW COSTS (Y/N)?: Y**
**CHANGE FINISHED COSTS (Y/N)?: Y** <Enter> past all fields to change all fields that have new prices stored, waiting for this update to be run. If certain fields are not to be changed in this update, type an "N" over the "Y" and press <ENTER>.

**IS THIS INFORMATION CORRECT (Y/N)? Y**

**ARE YOU SURE YOU WANT TO DO THIS (Y/N)? N**
