Parts on Order W/Detail

PROGRAM NAME: INSTATUS
MENU OPTION TITLE: Parts On Order W/Detail
MAIN MODULE: PARTS/RPTS GENERAL
HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

The output of this report is a complete current condition including Quantities, Minimums and Maximums, and Due Dates for P.O. Quantities. Information is pulled from active Work Orders and Unshipped Orders and fed into the {RAW}, {WIP}, {FIN}, {ASSIGNED}, and {ON ORDER} fields. Net Stock is calculated by adding RAW/WIP/ and FIN quantities, less ASSIGNED.

We have also supplied this report with {REORDER POINT} and {FULL STOCK LEVEL} quantities. Now you can compare Net Stock against Minimum and Maximum levels to see if you have enough inventory or too much on hand. You also have the option to print Expected Quantities and Dates.

NOTE: We recommend that this report gets sent to a wide carriage printer due to the width of the printout.

PROGRAM OPERATION

SELECT REPORT GROUP or RETURN FOR ALL: You can select the output by a valid Grouping Code or print the entire list. Simply type in a valid Grouping Code or press <ENTER> for the complete list. Be sure to follow the directions at the bottom of the screen. It recommends using a wide carriage printer and condensed type.

PRINT ALL EXPECTED DATES (Y/N)? If you want a list of all inventory on order, including date expected, you must enter <Y>. Type <N> if you don't want the report to include expected inventory. This information helps when you are trying to schedule Work Orders or prepare for a sales promotion that would require that part.
