

Parts Shpd by Part#/Std Cost

PROGRAM NAME: LINECOST

MENU OPTION TITLE: Parts Shpd by Part#/Std Cost

MAIN MODULE: ORDERS SHIPPED REPORT

HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This program calculates the quantity of parts shipped per the defined range of time at current standard cost. The sales dollars come from the actual orders shipped. The inventory cost comes from the current standard cost in the part master file.

Probably the most significant use of this report would be to look at what kind of margin a defined historical sales period would have at today's current standard costs.

CAUTION: Archived orders will not be included in this report. You can run the program {LINECST3} to generate the same report for archived orders.

PROGRAM OPERATION

ENTER BEGINNING PERIOD DATE: All parts shipped before this date will not be included.

ENTER ENDING PERIOD DATE: All parts shipped after this date will be ignored.

ENTER PRINTER # TO USE: < >: Choose a printer that has been set up in the printer setup file. You can type in the exact printer or use <IFF> to find the correct printer.

NOTE: This report requires condensed print and wide paper! This is a large report. For best output, use a wide carriage printer and condensed print.
