

## **Orders Taken by Part#**

**PROGRAM NAME:** LINEORDR

**MENU OPTION TITLE:** Orders Taken by Part#

**MAIN MODULE:** ORDERS TAKEN REPORTS

**HELP KEY ACTIVE:** NO

## **PROGRAM OVERVIEW**

This program calculates the quantity of parts ordered per the defined range of time at current standard cost. The sales dollars come from actual orders taken. The inventory cost comes from the current standard cost in the part master file.

Probably the most significant use of this report would be to look at what kind of margin a defined historical sales period would have at today's current standard costs.

CAUTION: Archived orders will not be included in this report.

## **PROGRAM OPERATION**

**ENTER BEGINNING PERIOD DATE:** All orders shipped before this date will not be included.

**ENTER ENDING PERIOD DATE:** All orders shipped after this date will not be included.

**ENTER PRINTER # TO USE:** You must choose a specific printer that has been setup in the printer setup file. You can type in the exact printer or use <IFF> to find the correct printer. If you choose a defined report, then you will be prompted:

**NOTE: This report requires condensed print and wide paper!**

**PRINT DETAIL <Y/N>?**

**Is this information correct <Y/N>?**
