Print Price Sheets

PROGRAM NAME: PRICEPRT
MENU OPTION TITLE: Print Price Sheets
MAIN MODULE: PRICE SHEET FUNCTIONS
HELP KEY ACTIVE: NO

PROGRAM OVERVIEW

This program prints price sheets for Wholesale, Dealer, or Retail price levels, with a user defined price sheet effective date.

PROGRAM OPERATION

PRIDE SHEET ID TO PRINT: You are first prompted for a valid price sheet id. You can page up or down to scroll through the valid price sheets to easily find what you have previously created.

EFFECTIVE DATE OF PRICE SHEET: Once you have chosen the price sheet you wish to print, you must enter in the date you wish to print on the price sheet. This date does not store anywhere in the system and only prints out on the first page of any printed price sheet. You can type in any date.

WHOLESALE, DEALER, OR RETAIL PRICE SHEET (W/D/R): After you fill in the date, you must choose which price level you wish to print the price sheet for: Wholesale; Dealer; or Retail.

ENTER THE FILE NAME OR OUTPUT DEVICE: Finally, you must specify the output device from the printer setup file. If you have defined an output to the disk in the printer setup file, then you will be able to use the stored file in a word processor or a desktop publishing system to enhance with graphics and extended fonts, etc. Give the file on disk to your advertising/printing firm, if they have a modern publishing system they will be able to utilize the file you have created in their desktop publishing system, which can result in substantial savings.
