

Re-Print Packing Lists

PROGRAM NAME: ROCKER
MENU OPTION TITLE: Re-Print Packing Lists
MAIN MODULE: DIST ORDER PRINTING
HELP KEY ACTIVE: YES

PROGRAM OVERVIEW

This program allows user input of ORDER NUMBERS to be re-printed into a spool file {FWORK1}, and then re-prints the packing lists from this spool file, sorted by order number.

NOTE: This program uses the same spool file as the invoice re-printing and should not be run at the same time.

PROGRAM OPERATION

ORDER #: You must type the order number. You cannot use <IFF> to find an order in this program. Once you press <ENTER>, the number you input, will disappear. That is all that should happen so far. You may enter in as many numbers as you like: they will not print yet. Once you have entered all of the order numbers you want, type <Q> and then <ENTER>. The system will now display a second screen. The first part of the screen says the following:

PRESS A KEY WHEN YOU HAVE A PRINTER ASSIGNED AND ORDER FORMS LOADED AND READY TO GO. TO ABORT, TYPE A <Q>: You may either type <Q> and press <ENTER> to abort or press <ENTER> to continue. If you pressed <ENTER> you will be asked:

DID IT LINE UP OK?

DID THE PACKING LISTS PRINT OK? <Y/N>:

DO YOU WANT TO CLEAR THE SPOOL FILE? If the packing list printed okay and you are done with the past invoices you will want to enter <Y>es to clear the spool file. If you enter <N>, you will have the chance to go back into this program and try again.
